Codul diagnosticelor/
CMD/Index DRG

Anexa A

Codul de diagnostic/Categoria majora de diagnostic (CMD)/Index DRG

Aceasta anexa listeaza fiecare cod de diagnostic ICD-10-AM folosit pentru a defini CMD-urile si DRG-urile când codul apare fie ca diagnostic principal fie ca un diagnostic aditional (secundar). Totusi, sunt exceptii codurile de diagnostic ce apar în functiile 'Problema majora' si 'Probleme majore multiple' pentru nou-nascuti (listate la sfarsitul CMD 15 din Volumul 2).

Cel mai simplu tip de diagnostic care este listat în aceasta anexa este cand sunt listate pentru un cod numai DRG-uri dintr-un DRG Adiacent (ADRG) si CMD. De exemplu, listarea pentru codul de diagnostic E77.8 *Alte tulburari ale metabolismului glycoproteinic*

Cod	CMD	DRG
E77.8	10	K63Z

arata ca E77.8 este unul din diagnosticile principale definind DRG medical K63Z în CMD 10. Daca o inregistrare are un diagnostic principal E77.8 si fara proceduri in sala de operatii, va fi alocata la DRG K63Z.

In unele cazuri DRG-urile de la doua sau mai multe ADRG, dar numai un CMD, sunt listate pentru un cod. Aceasta se produce de obicei cand diagnosticul este folosit pentru a defini divizarea dupa severitate a unui ADRG chirurgical, cand codurile de diagnostic adauga specificitate definitiei ADRG astfel incat o inregistrare este alocata corect unuia din mai multe DRG-uri chirurgicale sau cand CMD este 18 sau 21 iar diagnosticul este folosit pentru a defini HIV sau DRG-uri pentru multiple traume ca si DRG-urile medicale in aceste CMD-uri.

De exemplu, codurile privind starea maligna, cum ar fi C22.0 *Carcinom al celulei hepatice* definesc divizarile dupa severitate pentru unele ADRG-uri chirurgicale. Listarea pentru acest cod este

Cod	CMD	DRG
C22.0	O7	H02A, H61A, H61B

Aceasta arata ca C22.0 este unul din diagnosticile principale definind DRG-urile medicale H61A si H61B in CMD 07; si de asemenea unul din diagnosticile care definesc divizarea dupa severitate in ADRG chirurgical H02. Daca o inregistrare are un diagnostic principal C22.0, fara diagnostice aditionale si fara proceduri in sala de operatii, va fi alocata la ADRG H61. Pe de alta parte, daca inregistrarea are un diagnostic principal C22.0, fara diagnostice aditionale si cu o procedura in sala de operatii la 30460-07 *Hepatoenterostomie*, procedura va face ca inregistrarea sa fie grupata la ADRG H02 (vezi Anexa B). Inregistrarea va fi alocata mai degraba la DRG H02A decat la DRG-urile H02B sau H02C din cauza diagnosticului principal C22.0 (vezi CMD 07 capitol din Volumul 1).

Un exemplu de cod de diagnostic care adauga specificitate definitiilor unui ADRG chirurgical este listarea pentru codul de diagnostic S81.0 *Plaga deschisa a genunchiului*:

Cod	CMD	DRG
S81.0	21	W61Z, X04A, X04B, X07A, X07B, X60A, X60B, X60C

Aceasta arata ca S81.0 este unul din diagnosticile principale definind DRG-urile medicale W61Z (trauma multipla) si X60A, X60B si X60C in CMD 21; si este de asemenea unul din diagnosticile definind ADRG-urile X04 si X07. O inregistrare cu un diagnostic principal S81.0 si fara diagnostice aditionale sau proceduri in sala de operatii va fi grupata la ADRG X60. Totusi, daca inregistrarea are un diagnostic principal S81.0, fara diagnostice aditionale si o procedura 90582-01 *Sutura a tendonului, neclasificata altundeva*, procedura va face ca inregistrarea sa fie alocata mai degraba la ADRG X04 decat la X60. (Anexa B arata ca 90582-01

defineste ADRG-urile W01, X04, X05 si X06 in CMD 21, dar combinatia codurilor de diagnostic si procedura arata ca inregistrarea ar fi grupata la ADRG X04.)

In urmatorul exemplu, diagnosticul defineste un DRG HIV ca si DRG-uri medicale in CMD 18. Listarea pentru A02.1 *Sepsis cu Salmonella* este

Cod	CMD	DRG
A02.1	18	S60Z, S65A, S65B, S65C, T60A, T60B

Aceasta arata ca A02.1 este unul din diagnosticile principale definind DRG-urile HIV S60Z, S65A, S65B, S65C si DRG-urile medicale T60A si T60B in CMD 18. Daca o inregistrare are un diagnostic principal A02.1, fara diagnostice aditionale si fara proceduri in sala de operatii, inregistrarea va fi alocata la ADRG T60. Pe de alta parte, daca inregistrarea are un diagnostic principal A02.1, un diagnostic aditional B24 *Boala privind virusul imunodeficientei umane [HIV] nespecificata*, iar pacientul a stat peste noapte sau mai mult, inregistrarea va fi alocata la HIV si mai degraba la ADRG S65 decat la ADRG T60 (vezi HIV logic pentru definitiile Pre-CMD si CMD 18 DRG, in volumele 1 si respectiv 2).

Listarea celui mai complex tip de diagnostic este atunci cand DRG-urile de la doua sau mai multe ADRG-uri din doua sau mai multe CMD-uri sunt listate pentru un cod. Aceasta se produce cand diagnosticul este folosit pentru a defini HIV sau DRG-urile traumelor multiple sau in cazurile cand un diagnostic este de asemenea un diagnostic de complicatie intr-o divizare dupa severitate (adica ADRG F42 in CMD 05; ADRG-uri P65, P66 si P67 in CMD 15; si ADRG Q60 in CMD 16). De exemplu, listarea pentru codul de diagnostic C46.0 *Sarcom Kaposi al pielii* este

Cod	CMD	DRG
C46.0	09	J67A, J67B
	16	Q60B
	18	S60Z, S65A, S65B, S65C

Aceasta arata ca C46.0 este unul din diagnosticile principale definind DRG-urile medicale J67A si J67B; si ca, atunci cand se produce impreuna cu unul din codurile HIV ca un diagnostic aditional, este unul din diagnosticile principale definind DRG-urile S60Z, S65A, S65B si S65C. Daca o inregistrare are un diagnostic principal C46.0, fara diagnostice aditionale si fara proceduri in sala de operatii, ea va fi alocata la ADRG J67. Pe de alta parte, daca inregistrarea are un diagnostic principal C46.0, un diagnostic aditional B24 *Boala privind virusul imunodeficientei umane [HIV] nespecificata*, iar pacientul a stat peste noapte sau mai mult, inregistrarea va fi grupata la DRG S65A, S65B sau S65C, depinzand de Nivelul Complexitatii Clinice a Pacientului (vezi HIV logic pentru definitiile Pre-CMD si CMD 18 DRG, in volumele 1 si respectiv 2). Codul de diagnostic C46.0 afecteaza de asemenea gruparea atunci cand apare pe inregistrare ca un cod de diagnostic aditional, de aici listarea la DRG Q60B. Daca, de exemplu, o inregistrare are un diagnostic principal D63.0 (o manifestare pe care standardele codificarii o indica a nu fi alocata ca un diagnostic principal), are numai un cod de diagnostic aditional, C46.0, si fara proceduri in sala de operatii, va fi alocata la DRG Q60B cu un stegulet de avertizare indicand ca diagnosticul principal este o manifestare.

Trauma multipla este mai dificil de determinat decat alte alocari de CMD. Considerati un pacient cu un diagnostic principal S82.0 *Fractura de rotula* si cu diagnostice aditionale S37.01 *Contuzie si hematom al rinichiului*, S36.83 *Leziune a retroperitoneului*, S83.6 *Dislocare si intindere a altor parti si nespecificate ale genunchiului* si S22.42 *Fracturi multiple de coasta implicand doua coaste*. Listarea pentru diagnosticul S82.0 este

Cod	CMD	DRG
S82.0	08	I02A, I02B, I20Z, I75A, I75B, I75C
	21	W61Z

Examinarea listelor traumei multiple in definitiile DRG pentru CMD 21 (Volumul 2) arata ca S37.01 este pe lista pentru a arata trauma rinichiului, iar S36.83 este pe lista pentru a specifica trauma coloanei vertebrale sau pelvisului. Aceasta inseamna ca inregistrarea ar fi alocata mai degraba la DRG W61Z trauma multipla in CMD 21 decat la un DRG in CMD 08.

Anexa B

Codul procedurilor/

CMD/Index DRG

Anexa B

Cod de procedura/Categorie majora de diagnostic (CMD) /Index DRG

Această anexa listează fiecare cod de procedura ICD-10-AM și da detalii despre CMD-uri și DRG-urile în care sunt cuprinse. Procedurile care nu se efectuează în sala de operații sunt indicate prin ‡ urmând codului de procedura. Sunt excepții codurile de procedura care apar la Pacemaker și care nu sunt legate de activități procedurale la sala de operații (listate la sfârșitul Volumului 2). Activitatea procedurală care nu este legată de sala de operații conține logica ce definește DRG-urile care sunt abateri de la regulile de diagnostic și procedura 901Z, 902Z și 903Z.

Unele coduri de procedura sunt listate numai într-un singur CMD. De exemplu, listarea pentru codul de procedura 90115-00 *Alte proceduri efectuate pe oscioarele urechii* este

Cod	CMD	DRG
90115-00	03	D09Z

Aceasta arată că 90115-00 este unul din codurile de procedura efectuată în sala de operații definind DRG D09Z. Dacă o înregistrare are un diagnostic principal CMD 03 (de exemplu, H71 *Colesteatoma urechii mijlocii*), iar 90115-00 este singura procedura, înregistrarea va fi alocată la DRG D09Z. Totuși, dacă înregistrarea are un diagnostic principal CMD 21 (de exemplu, T85.5 *Complicație mecanică a aparatelor protetice, implanturilor și grefelor gastrointestinale*), iar 90115-00 este din nou singura procedura, înregistrarea va fi grupată la DRG Abateri 901Z *Procedura extensivă în sala de operații nelegată de diagnosticul principal*, din moment ce nu există DRG-uri la CMD 21 listate pentru codul de procedura efectuată în sala de operații.

Codurile de proceduri care nu sunt efectuate în sala de operații pot avea un efect diferit asupra grupării înregistrărilor și sunt listate diferentiat în această anexă. De exemplu, listarea pentru codul de procedura 31205-00 *Excizie a leziunii pielii și țesutului subcutanat a altei localizări* este

Cod	CMD	DRG
31205-00 ‡	09	J11Z

Aceasta arată că 31205-00 este un cod de procedura care nu este efectuată în sala de operații și ca este folosit în definiția DRG J11Z. Dacă o înregistrare are un diagnostic principal CMD 09 (de exemplu, C44.3 *Tumora malignă a pielii altor părți și nespecificată ale feței*) și 31205-00 este singura procedura, înregistrarea va fi alocată la DRG J11Z. Dacă înregistrarea are un diagnostic principal CMD 03 (de exemplu, H81.1 *Vertij paroxistic benign*), iar 31205-00 este din nou singura procedura, înregistrarea va fi grupată la DRG-ul medical corespunzând diagnosticului principal – adică, DRG D61Z *Dezechilibru*.

Un cod de procedura poate fi listat la mai multe DRG-uri din mai multe CMD-uri diferite. De exemplu, listarea pentru codul de procedura 32111-00 *Excizie a mucoasei rectale pentru prolaps rectal* este

Cod	CMD	DRG
32111-00	06	G02A, G02B
	21	W03Z, X06A, X06B

Aceasta arată că 32111-00 este unul din codurile de procedura efectuată în sala de operații definind fiecare din DRG-urile listate mai sus. Dacă înregistrarea are un diagnostic principal CMD 06 (de exemplu, K62.3 *Prolaps rectal*), iar 32111-00 este singura procedura, înregistrarea va fi alocată la DRG Adiacent (ADRG) G02.

Dacă înregistrarea are un diagnostic principal de traumă și cel puțin două coduri de diagnostic pentru traumă cu diferite localizări pe corp, iar 32111-00 este singura procedura, înregistrarea va fi alocată la ADRG W03

Proceduri abdominale pentru trauma multipla semnificativa. Lista codurilor care califica o inregistrare pentru DRG-urile privind trauma multipla poate fi gasita in Volumul 2 CMD 21 – Trauma multipla. Dar daca este un diagnostic principal CMD 21, si inregistrarea *nu* intruneste criteriile pentru trauma multipla semnificativa, iar 32111-00 este singura procedura, inregistrarea va fi in schimb alocata la ADRG X06 *Alte proceduri pentru alte leziuni* in CMD 21. Un exemplu ar fi o inregistrare cu un diagnostic principal T81.0 *Hemoragie si hematom complicand o procedura, neclasificata altundeva* si un singur cod de procedura, 32111-00.

Totusi, daca o inregistrare are un diagnostic principal CMD 11 (de exemplu, N36.8 *Alte tulburari specificate ale uretrei*), iar 32111-00 este singura procedura, atunci va fi grupata la DRG Abatere 901Z *Procedura extensiva efectuata in sala de operatii nelegata de diagnosticul principal* deoarece CMD 11 nu este listat pentru procedura efectuata in sala de operatii 32111-00.

Un cod de procedura poate fi listat la mai multe DRG-uri la diferite ADRG-uri intr-un singur CMD. De exemplu, listarea pentru codul de procedura 90282-00 *Excizie a nodului limfatic al altei localizari* este

Cod	CMD	DRG
90282-00	03	D12Z
	04	E02A, E02B, E02C
	06	G12A, G12B
	08	I12A, I12B, I12C, I28A, I28B
	09	J11Z, J12A, J12B, J12C, J13A, J13B
	10	K09Z
	11	L09A, L09B, L09C
	12	M06A, M06B
	13	N11A, N11B
	21	W04Z, X04A, X04B, X05Z, X06A, X06B

Aceasta arata ca 90282-00 este unul din codurile de procedura efectuata in sala de operatii definind fiecare din DRG-urile listate mai sus. Luand CMD 09 ca un exemplu, 90282-00 este parte din definitia a trei ADRG-uri. Examinarea logicii pentru aceste ADRG-uri (vezi sectiunea despre CMD 09, Volum 2) arata ca alocarea ADRG va fi determinata de combinarea codurilor de diagnostic si procedura pe inregistrare. Daca o inregistrare are un diagnostic principal CMD 09 cu R22.0 *Tumefactie, bloc si tumora localizata, cap*, iar 90282-00 este singura procedura efectuata in sala de operatii, inregistrarea va fi alocata la ADRG J11. Daca o inregistrare are un diagnostic principal CMD 09 cu C43.7 *Melanom malign al membrului inferior, incluzand soldul*, un diagnostic secundar L97 *Ulceratie a membrului inferior NEC*, iar 90282-00 este singura procedura efectuata in sala de operatii, inregistrarea va fi alocata la ADRG J12 (daca nu exista alt cod de diagnostic additional pentru ulcer sau celulita, inregistrarea este alocata la ADRG J13). Includerea procedurii efectuata in sala de operatii 45439-00 *Grefa de piele sub forma de pana mica cu alta localizare* pe inregistrare va afecta alocarea unui DRG din cadrul ADRG J12 (sau J13).

Aceasta anexa nu listeaza toate codurile de procedura ICD-10-AM – codurile nefolosite pentru alocarea unui DRG sunt excluse. Luati, de exemplu, o inregistrare cu un diagnostic principal N35.9 *Stricturea uretrala, nespecificata* si procedurile 11900-00 *Observarea fluxului urinar* si 37303-00 *Dilatatie a stricturii uretrale*. Nu exista listari pentru codurile de procedura 11900-00 si 37303-00 in aceasta anexa, iar inregistrarea ar fi grupata la DRG medical care corespunde mai degraba diagnosticului principal (adica, L66Z) decat la un DRG chirurgical sau ‘alte DRG-uri’.

Cand luam in considerare o inregistrare care contine mai mult de o procedura, ar trebui sa fie folosita aceasta anexa pentru a obtine detalii ale posibilelor DRG-uri chirurgicale sau ‘alte DRG-uri’ pentru fiecare cod. Daca exista proceduri in sala de operatii pe inregistrare, dar nici una nu este listata la DRG-uri pentru un CMD adecvat, inregistrarea va fi alocata la unul din DRG-urile Abatere 901Z, 902Z sau 903Z. Altminteri, acolo unde mai mult de unul dintre codurile de procedura listeaza DRG-uri chirurgicale sau ‘alte DRG-uri’ pentru CMD, ierarhiile chirurgicale sau ‘alta’ din cadrul CMD vor determina in cele din urma alocarea DRG-ului. De exemplu, considerati o inregistrare cu un diagnostic principal K22.1 *Ulcer al esofagului* si procedurile 30527-02 *Fundoplastie, abord abdominal* si 30390-00 *Laparoscopie*. Listarea pentru aceste coduri este:

Cod	CMD	DRG
30390-00	06	G12Z, G12B
	07	H05A, H05B
	09	J11Z, J12A, J12B, J12C, J13A, J13B
	11	L09A, L09B, L09C
	13	N08Z
	21	W03Z, X06A, X06B
	22	Y01Z, Y03Z
	30527-02	06
21		W03Z, X06A, X06B

Diagnosticul principal arata ca CMD este 06, iar listarea de mai sus revela faptul ca inregistrarea ar putea fi alocata fie la ADRG G03 sau G12. Pentru a aloca inregistrarea numai unuia din aceste ADRG-uri, desfasurarea intregului CMD 06 impreuna cu definitiile DRG-urilor adiacente insotitoare ar necesita o examinare pentru a determina care procedura este in partea cea mai de sus in ierarhia chirurgicala pentru CMD. Cum ADRG G03 este deasupra ADRG G12 in ierarhia chirurgicala a CMD 06, aceasta inregistrare speciala ar fi alocata la ADRG G03.

Totusi, daca inregistrarea are un diagnostic principal K22.1 *Ulcer al esofagului*, si procedurile 32508-00 *Intrerupere a venelor varicoase de la jonctiunea safeno-femurala* si 30473-00 *Panendoscopie*, ar rezulta o alocare de DRG diferita. Listarea pentru aceste coduri este:

Cod	CMD	DRG
30473-00‡	06	G42A, G42B, G45A, G45B, G46A, G46B, G46C
	10	K40Z
	23	Z40Z
32508-00	05	F20Z

Diagnosticul principal arata ca CMD este 06, iar listarea de mai sus arata DRG-urile de la CMD 06 pentru procedura 30473-00 care nu este efectuata in sala de operatii. Totusi, nu exista DRG-uri la CMD 06 listate pentru procedura 32508-00 efectuata in sala de operatii, astfel inregistrarea ar fi alocata la DRG-urile Abatere. Daca inregistrarea contine de asemenea procedura 30572-02, efectuata in sala de operatii, ea ar fi alocata la ADRG G03, din moment ce G03 este deasupra ADRG-urilor G42, G45 si G46 in ierarhiile chirurgicale si 'altele' din cadrul CMD 06.

Anexa C

CC-uri,
excluderi ale CC și
calculare a PCCL

Anexa C

Complicatii si/sau comorbiditati (CC), excluderi ale complicatiilor si/sau comorbiditatilor, nivelul complicatiilor si/sau comorbiditatilor (CCL) si calcularea nivelului complexitatii clinice a pacientului (PCCL)

C.1 Introducere

Aceasta anexa se preocupa de complicațiile și comorbiditățile (CC), și de procesele prin care grouper-ul alocă CCL și PCCL înregistrărilor individuale. Acest material ar trebui să fie considerat în contextul întregului proces de grupare, care este discutat în Introducere.

C.2 Complicatii si comorbiditati

Codurile de **complicatii si/sau comorbiditati (CC)** sunt diagnostice aditionale care probabil rezulta într-un consum de resurse semnificativ mai mare.

În AR-DRG versiunea 5.0, sunt recunoscute 3.268 coduri de diagnostic ca CC-uri pentru neonatali, în timp ce 2.946 coduri sunt recunoscute drept CC-uri pentru cei care nu sunt neonatali. Unele coduri sunt CC-uri pentru neonatali dar nu pentru cei care nu sunt neonatali (de exemplu, P22.0 *Sindrom de detresa respiratorie a nou-nascutului*), și invers.

Un cod de diagnostic își poate pierde statutul de CC dacă (i) este foarte strans legat de diagnosticul principal pentru episod sau (ii) este un duplicat al unui cod care apare altundeva pe înregistrare sau (iii) a fost deja folosit în definiția DRG-ului adiacent (ADRG).

Cu AR-DRG versiunea 5.0, statutul de CC al unui diagnostic poate fi de asemenea afectat de sexul unui pacient sau de modul de separare. De exemplu, C79.6 *Tumora maligna secundara a ovarului* este un CC pentru femei, dar nu pentru barbati; în timp ce F10.0 *Tulburari de comportament si mentale datorita folosirii alcoolului – intoxicatie acuta* este numai un CC dacă pacientul nu a parasit spitalul împotriva avizului medical. Lista CC, care formează nucleul acestei anexe, constă într-o listă cuprinzătoare a tuturor CC-urilor, împreună cu detaliile posibilelor CCL-uri.

C.3 Diagnostice aditionale

Codurile de diagnostic folosite pentru alocarea CC sunt:

- Toate diagnosticele (ADRG-uri neonatale P01-P67 și ADRG-uri obstetricale O01-O66)
- Toate diagnosticele exceptând diagnosticul principal (toate celelalte ADRG-uri)

C.4 Nivelul complicației și comorbidității (CCL) și nivelul complexității clinice a pacientului (PCCL)

Nivelele complicației și comorbidității (CCL) sunt ponderi de severitate date de TOATE diagnosticele adiționale. Valorile nivelelor au un interval de la 0 la 4 pentru episoadele chirurgicale și neonatale și de la 0 la 3 pentru episoadele medicale și au fost dezvoltate printr-o combinație a judecății medicale și a analizei statistice. Valorile CCL pot varia între ADRG-uri. De exemplu, diagnosticul J96.0 *Insuficiența respiratorie acută* are o valoare CCL de 2 în ADRG B70 *Atac cerebral*, dar o valoare CCL de 3 în ADRG B71 *Tulburări ale nervului periferic și cranian*.

Valoarea actuală a CCL dată de un diagnostic depinde de condiția ca acel cod să fie un CC valid și de a fi clasificat ca minor, moderat, sever sau catastrofal în termenii ADRG pentru înregistrare. Adică:

- CCL = 0 - codul nu este o complicație/comorbiditate; sau
- codul formează o parte a definiției pentru ADRG –ul la care episodul a fost alocat; sau
- codul este o complicație/comorbiditate, dar este strans legat de diagnosticul principal; sau
- exact același cod apare altundeva pe înregistrare;
- CCL = 1 - codul este o complicație/comorbiditate minoră;
- CCL = 2 - codul este o complicație/comorbiditate moderată;
- CCL = 3 - codul este o complicație/comorbiditate severă;
- CCL = 4 - codul este o complicație/comorbiditate catastrofală

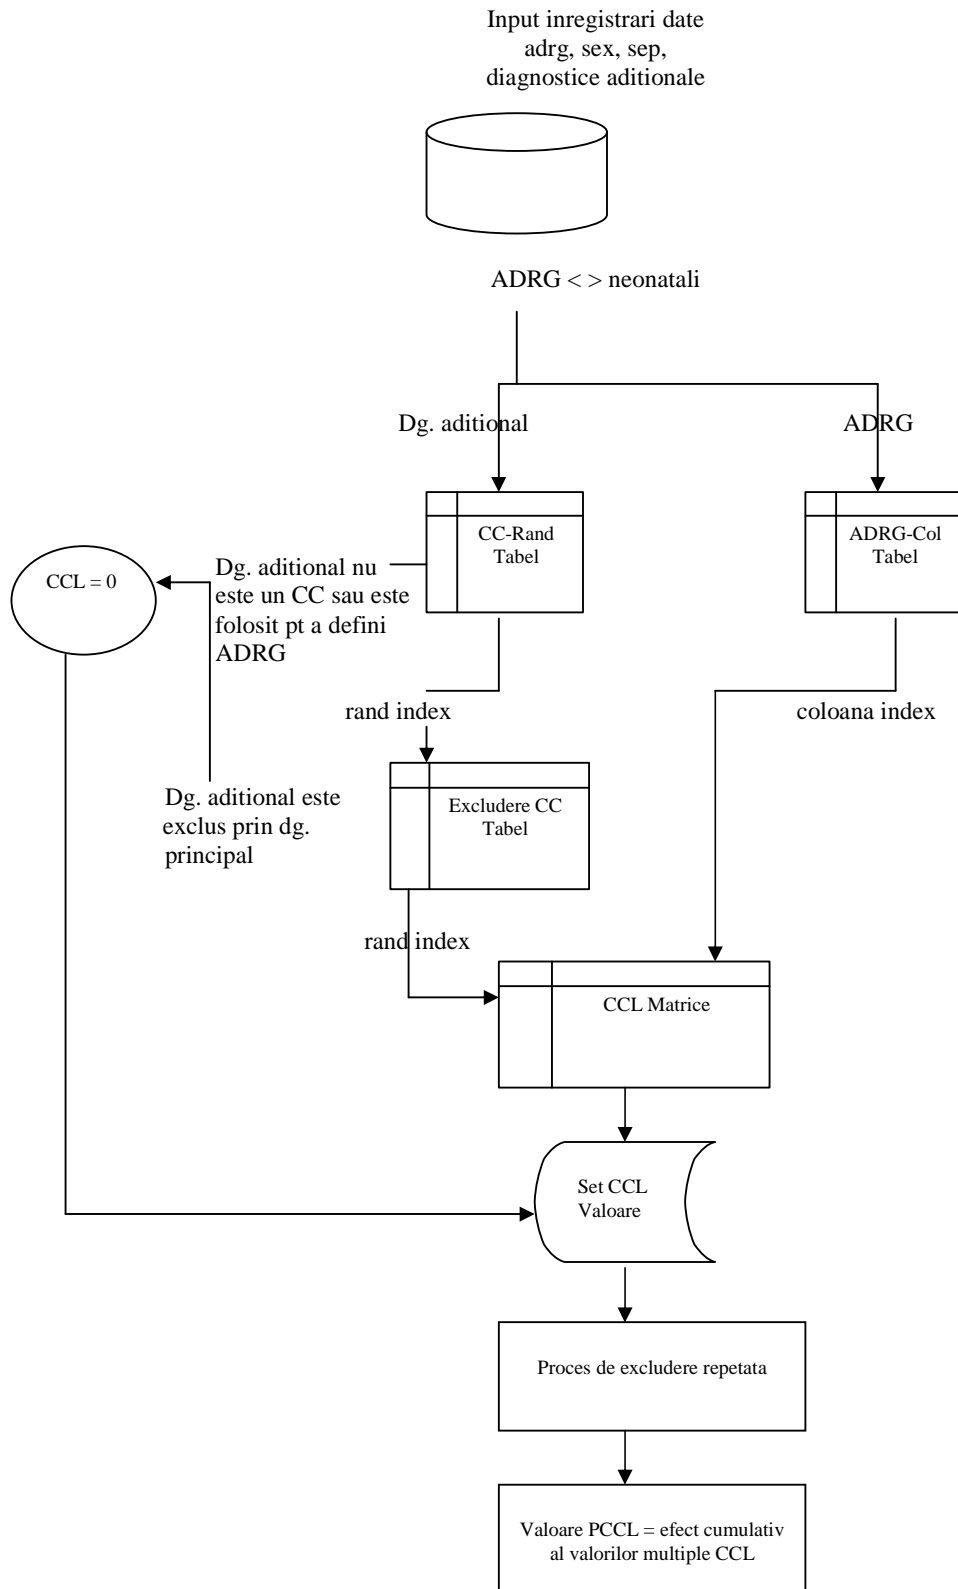

Numai codurile CC primesc o valoare mai mare de zero.

Grupele obțin automat valorile CCL pentru fiecare diagnostic pe o înregistrare, dar adoptă procese diferite pentru episoadele neonatale și care nu sunt neonatale. În cazul episoadelor care nu sunt neonatale, grupul efectuează următorii pași.

- Cu excepția episoadelor de la ADRG-urile O01 până la O66 (obstetrică), grupul identifică ADRG-ul de care aparține episodul, și atunci verifică dacă respectivul cod face parte din definiția ADRG. Dacă el nu face parte din definiție, este exclus ca un CC și i se dă o valoare CCL de zero.
- Verificați dacă ADRG implică fie trauma multiplă (ADRG W01 – W61) fie HIV (ADRG S60 – S65). Deoarece afecțiunile provocate de trauma au fost luate în considerare când s-a alocat CMD 21, diagnosticele adiționale ale traumei (S0000-T149, T790-T799) sunt excluse ca CC-uri și primesc o valoare CCL de zero. În mod similar, cu diagnosticele HIV (B20-B24) în CMD 18.
- Verificați dacă respectivul cod este un duplicat al diagnosticului principal sau un diagnostic adițional procesat anterior. Dacă este un duplicat codul, el primește o valoare CCL de zero.
- Dacă ADRG-ul nu este în intervalul O01-O66 (obstetrică), verificați dacă acel cod ar trebui să fie exclus ca un CC în baza legăturii stranse cu diagnosticul principal [Nota: Această informație este obținută din lista de Excludere a CC care este disponibilă pe CD-ROM la sfârșitul acestui volum]. În cazul în care codul este exclus, i se dă o valoare CCL de zero.
- Folosiți numărul DRG-ului Adiacent pentru a obține un număr de coloană din tabelul ADRG-Col. Codul primește o valoare CCL de zero dacă numărul coloanei este zero.
- Folosiți numărul DRG-ului Adiacent pentru a obține numărul randului, după ce s-a luat în considerare posibilă influența a sexului pacientului și/sau modul de separare; și
- cautați matricea CCL, folosind numerele de rând și coloană pentru a obține valoarea CCL.

Procesul de alocare a CCL pentru cei care nu sunt neonatali este descris în Figura C.1. (Nota: Cu toate că grupul obține o valoare CCL pentru diagnosticul principal pe înregistrarea celor care nu sunt neonatali, nu folosește această valoare când se calculează PCCL, cu excepția înregistrărilor care sunt grupate la ADRG-urile O01-O66 în CMD 14. Grupul folosește valorile CCL pentru diagnosticul principal în vederea calculării PCCL în aceste ADRG-uri).

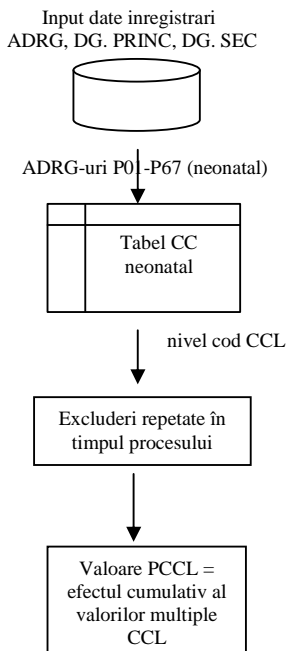

FIGURA C.1 Procesul de calculare a PCCL pentru episoadele privind pacienții care nu sunt neonatali

Episoadele celor care nu sunt neonatali – insemna episoade alocate la ADRG-urile P01-P67 – sunt tratate in mod diferit. Toate codurile de diagnostic sunt tratate ca diagnostice aditionale, iar detaliile privind CC-urile si valorile CCL sunt obtinute dintr-un tabel separat cuprinzand CC-uri ale neonatalilor (disponibil pe CD-

ROM). Diagnosticelor care nu sunt incluse în acest tabel li se alocă o valoare CCL de zero. Figura C2 ilustrează procesul de alocare CCL la neonatali. [Nota: Valorile CCL și PCCL calculate pentru neonatali nu sunt folosite în scopul alocării DRG. Episoadele neonatale sunt alocate DRG-urilor în baza listei privind problemele majore pentru CMD 15 (vezi Volumul 2, CMD 15 – Probleme majore)]

FIGURA C.2 Procesul de calculare a PCCL pentru episoadele neonatale

Calcularea CCL pe CD-ROM furnizează un mod ușor de a obține valoarea CCL pentru orice ADRG și combinație de diagnostice adiționale (Dg. sec). Totuși, este important să se țină seama de notele care însoțesc acest software.

Nivelul complexității clinice a pacientului (PCCL) este o măsură a efectului cumulativ privind complicațiile și comorbiditățile unui pacient, și este calculat pentru fiecare episod. Calcularea este complexă și a fost proiectată pentru a preveni ca afecțiuni similare să nu fie numărate decât o singură dată. O valoare PCCL de:

- 0 = fără efect al CC;
- 1 = CC minor;
- 2 = CC moderat;
- 3 = CC sever; și
- 4 = CC catastrofal.

Alocarea PCCL

Odată obținute valorile CCL pentru fiecare diagnostic pe o înregistrare (indiferent dacă înregistrarea se referă la un episod neonatal sau care nu este neonatal), gruper-ul aranjează codurile diagnosticului adițional în mod alfabetic în cadrul ordinii descrescătoare a valorii CCL și apoi aplică un proces de excludere repetată. Acest proces – care a fost conceput pentru a exclude diagnosticele nesemnificative, și a se asigura că numai o singură dată sunt numărate afecțiunile similare – tratează fiecare diagnostic în parte ca și când ar fi diagnosticul principal. Adică, fiecare diagnostic în parte este tratat ca un diagnostic ‘ancora’, și deoarece fiecare diagnostic primește acest rol, statutul de CC al diagnosticelor ramase este revizuit în legătură cu ancora. Ca un rezultat al acestui proces, unele diagnostice adiționale sunt excluse ca CC-uri (primind o valoare a CCL de zero) nu din cauza relației față de diagnosticul principal, ci din cauza relației lor cu alt diagnostic adițional.

Notati că valorile CCL returnate de software-ul grouper-ului sunt cele alocate *înainte de procesul de excludere repetată*.

La sfarsitul procesului de excludere repetata, grouper-ul aplica o formula de calculare a PCCL pe baza valorilor CCL ramase.

Formula pentru calcularea nivelului de complexitate clinica a pacientului (PCCL)

Daca $\{CCL(i)\}$ este lista sortata a valorilor CCL care ramane la sfarsitul procesului de excludere repetata, formula pentru calcularea PCCL este:

$$PCCL = \begin{cases} 0 & \text{daca nu exista dg. sec} \\ 4 & \text{daca } x > 4 \\ x & \text{altminteri} \end{cases}$$

unde $x = \text{rotunjit} \left\{ \frac{\ln \left\{ 1 + \sum_{i=k} CCL(i)^* \exp(-\alpha^* (i-k)) \right\}}{\ln(3/\alpha)/4} \right\}$

α este un parametru si este pus in mod curent la valoarea de 0,4.

$k = 1$ pentru ADRG-urile P01-P67 si O01-O66; $k=2$ pentru toate celelalte ADRG-uri.

Acest algoritm a fost dezvoltat de Dr. Xichuan (Mark) Zhang ca parte a proiectului de perfectionare a CCL (vezi sectiunea 3.3 din Volumul 1).

Urmatorul tabel da detalii privind PCCL-rile care ar rezulta din diferite combinatii ale CCL.

C.5 Exemple

Calcularea PCCL pentru trei episoade care nu sunt neonatale

Urmatoarele trei cazuri sunt date pentru a ilustra modul in care grouper-ul considera variabile altele decat diagnosticul cand se calculeaza PCCL.

Cazul 1

Pacientul a fost un barbat de 74 ani, care s-a intors acasa in ziua admiterii. Diagnosticul principal – adica, diagnosticul stabilit dupa ce a fost considerat principalul responsabil care a provocat episodul de ingrijiri – a fost F43.9 *Reactie la stress sever, nespecificata*. Diagnosticile aditionale au fost F13.2 *Tulburari comportamentale si mentale datorite folosirii sedativelor si hipnoticelor, sindrom de dependenta*, F07.0 *Tulburare organica de personalitate*, F10.0 (inregistrata de doua ori) *Tulburari comportamentale si mentale datorite folosirii alcoolului, intoxicatie acuta*, I25.9 *Boala ischemica cronica de inima, nespecificata*, M47.86 *Alta spondiloza, regiune lombara*, M47.82 *Alta spondiloza, regiune cervicala*.

Aceasta inregistrare ar fi alocata la CMD 19 si ADRG U60. Folositi calcularea CCL pentru a obtine un CCL pentru fiecare cod de diagnostic, specificand un ADRG de U60.

Alocati CCL-uri pe rand fiecarui diagnostic incepand din partea stanga:

Dg. princ/ Dg. sec	F439	F132	F070	F100	I259	M4786	M4782	F100

Cazul 2

Pacientul a fost un barbat de 35 ani. El s-a intors acasa dupa 5 zile de spitalizare. Diagnosticul principal pentru episod a fost D64.9 *Anemie, nespecificata*. Diagnosticile aditionale au fost D61.8 *Alte anemii aplastice specificate*, A31.0 *Infectie pulmonara cu Mycobacterium*, A60.0 *Infectie a organelor genitale si tractului urinar prin virus herpetic*, B37.0 *Stomatita prin Candida*, B37.81 *Esofagita prin Candida* si B24 *Boala virusului imunodeficientei umane [HIV] nespecificata*.

Aceasta inregistrare ar fi alocata la CMD 18 si ADRG S65. Folositi calcularea CCL pentru a obtine un CCL pentru fiecare cod de diagnostic, specificand un ADRG de S65.

Alocati CCL-uri pe rand fiecarui diagnostic incepand din partea stanga:

PCCL=4

Cazul 3

Inregistrarea arata ca pacientul a fost o femeie de 46 ani care s-a intors acasa dupa 8 zile de spitalizare. Diagnosticul principal a fost C79.6 *Tumora maligna secundara a ovarului*. Diagnosticile aditionale au fost C79.82 *Tumora maligna secundara a organelor genitale*, C78.6 *Tumora maligna secundara a retroperitoneului si peritoneului*, C78.5 *Tumora maligna secundara a intestinului gros si rectului* si C80 *Tumori maligne fara specificarea localizarii*. Pacienta a suferit o histerectomie abdominala radicala cu excizia nodulilor limfatici pelvieni, cod de procedura 35664-00.

Grouper-ul ar aloca aceasta inregistrare la CMD 13 si ADRG N02. Folositi calcularea CCL pentru a obtine un CCL pentru fiecare cod de diagnostic, specificand un ADRG de N02.

Alocati CCL-uri pe rand fiecarui diagnostic incepand din partea stanga:

Calcularea PCCL pentru un episod neonatal

Pacientul a fost un sugar de 1 zi cu greutatea la admitere de 3000 grame, care s-a întors acasa după 90 de zile de spitalizare. Diagnosticul principal a fost Q79.3 *Gastroschizis*; în timp ce diagnosticele adiționale au fost K91.2 *Malabsorbție postchirurgicală, neclasificată altundeva*, K91.8 *Alte tulburări postprocedurale ale sistemului digestiv, neclasificate altundeva*, A41.52 *Sepsis datorită Pseudomonei* (înregistrat de două ori), A41.3 *Sepsis datorită Haemophilus influenzae*, B37.7 *Sepsis prin Candida*, E87.2 *Acidoză*, K56.2 *Volvulus*, E86 *Hipervolemie, deshidratare* și K56.5 *Aderente intestinale [bride] cu obstrucție*. Mai multe proceduri au fost efectuate, incluzând 32003-00 *Rezecție a stricturii intestinului gros cu reparare*.

Această înregistrare ar fi alocată la CMD 15 și ADRG P06. Folosiți calcularea CCL pentru a obține un CCL pentru fiecare cod de diagnostic, specificând un ADRG de P06.

Alocati CCL-uri pe rand fiecarui diagnostic incepand din partea stanga:

Anexa D

Editări

Anexa D

Editari

D. 1 Introducere

Înainte de alocarea unui CMD, grouper-ul aplica atât editările 'demografice' cât și cele 'clinice' pentru a verifica validitatea articolelor din fiecare înregistrare spitalicească. Aceste editări generează stegulete de 'avertizare' dacă ele întâlnesc informații care nu sunt valide sau care sunt inconsistente, și stegulete 'fatale' dacă problema împiedică alocarea unui CMD/DRG (de exemplu, introducerea unei vârste nepotrivite). Înregistrările cu editări fatale sunt alocate uneia din cele trei DRG-uri – adică 960Z, 961Z sau 963Z (vezi secțiunea 4.10 din Volumul 1 privind discuția despre DRG-urile Abatere).

D. 2 Editari demografice

TABEL D.1 Articole verificate prin editari demografice si inregistrari de date acceptabile

Articolele datei	Inregistrari acceptabile	Note
Varsta	Doua intervale valide: 1 la 364/5 zile (dacă anul este bisect sau nu), cu 'anii de varsta' zero sau neintrodusi; sau 1 la 124 ani, cu 'zilele de varsta' zero sau neintroduse	Dacă vârsta este calculabilă de la data internării și data nașterii, vârsta calculată are prioritate față de vârsta înregistrată. Nu există nici o valoare inițială pentru acest articol: dacă vârsta nu este înregistrată și nu poate fi calculată, episodul este alocat la DRG 960Z. <i>Negrupabila</i>
Sex	1 Barbat 2 Femeie 3 Nedeterminat 4 Necunoscut	Nu există nici o valoare inițială pentru acest articol
Greutatea la internare (in grame)	Interval valid: 400 până la 9999	Acest câmp este verificat când un pacient are vârsta mai mică de 1 an. Când înregistrarea este în alb sau zero, valoarea inițială este 2500 grame
Durata de spitalizare (in zile)	Interval valid: 1 până la 99999	Acest articol este calculat de la data internării până la data externării. Durata de spitalizare este redusă prin numărul de zile de concediu medical, dacă zilele de concediu medical sunt mai puține decât durata de spitalizare. Dacă datele de internare și externare sunt aceleași, durata de spitalizare este calculată ca 1 zi. În cazurile în care durata de spitalizare este calculabilă, dar o valoare validă este introdusă ca o variabilă separată, grouper-ul folosește valoarea mai mică. Nu există nici o valoare inițială pentru acest articol.
Spitalizare de zi	1 De zi 0 Nu de zi	Grouper-ul folosește datele de internare și externare pentru a calcula spitalizarea de zi, cu condiția ca aceste date să fie valide. Când atât valorile introduse cât și cele calculate sunt valide, grouper-ul o folosește pe aceea care este mai mare dintre cele două (adică, aceeași zi). Când numai una din aceste valori este validă, grouper-ul folosește acea valoare. Când atât valoarea înregistrată cât și cea calculată sunt invalide, și totuși spitalizarea de zi este necesară pentru grupare, episodul este alocat la DRG 960Z <i>Negrupabil</i> . Nu există valoare inițială pentru acest articol.

Articolele datei	Inregistrari acceptabile	Note
Starea legala a sanatatii mentale	1 Involuntar	Acesta identifica daca pacientul a fost tratat pe o baza involuntara conform legislatiei sanatatii mentale de stat sau teritoriale. Toate valorile in afara de '1` (incluzand valorile invalide)
	2 Voluntar	
	9 Necunoscut	
Modul de externare	1 sau 01 Externare/transfer la un spital de boli acute	Sunt tratate ca un '2`. Valoarea initiala pentru acest articol este '2`. Aceasta da starea la exrternare a pacientui (externare/transfer/deces) si locul in care pacientul a fost eliberat (daca se aplica). Nu exista valoare initiala pentru acest articol.
	2 sau 02 Externare/transfer la un camin	
	3 sau 03 Externare/transfer la un spital de psihiatrie	
	4 sau 04 Externare/transfer la o alta unitate de ingrijiri de sanatate	
	5 sau 05 Externare statistica – tipul de schimbare	
	6 sau 06 Plecare impotriva avizului medical	
	7 sau 07 Externare statistica prin plecare	
	8 sau 08 Decedat	
	9 sau 09 Acasa/alta	

D. 3 Editari clinice

Grouper-ul face verificari ca toate codurile de diagnostice si proceduri sa fie coduri valide ale ICD-10-AM a treia versiune, si ca varsta si sexul pacientului sa nu intre in conflict. Codurile duplicate sunt ignorate daca ele se refera la diagnostice, dar nu sunt ignorate daca ele se refera la proceduri. Codurile de diagnostic ce se refera la morfologia tumorilor nu sunt folosite de grouper (folositi software-ul grouper-ului si manualul beneficiarului pentru detalii privind excluderea/introducerea acestor coduri).

TABEL D. 2 Inregistrari acceptabile pentru diagnostice si proceduri

Articolele datei	Inregistrari acceptabile	Note
Diagnostice (ICD-10-AM)	Cod valid definit complet (nivelul cel mai de jos) din ICD-10-AM, a treia editie, Volumul 1	Diagnosticele duplicate sunt ignorate
Proceduri (ICD-10-AM)	Cod valid definit complet (nivelul cel mai de jos) din ICD-10-AM, a treia editie, Volumul 3	Procedurile duplicate nu sunt ignorate

In plus, grouper-ul verifica diagnosticul principal pentru a se asigura ca este acceptabil ca diagnostic principal, si ca nu este nici un cod de manifestare (vezi Tabelul D. 3 de mai jos) nici un cod folosit pentru a descrie o cauza externa a leziunii si/sau otravirii (vezi Capitolul XX din ICD-10-AM a treia editie, Volumul 1).

Editariile clinice implica patru seturi de tabele. Aceste tabele formeaza baza acestei anexe si sunt descrise in Tabelul D. 3

TABEL D. 3 Tabele folosite pentru editari clinice

Numar tabel	Descriere	Note
D.5	Diagnostice principale neacceptabile	Unele coduri sunt valide in termenii ICD-10-AM, dar nu sunt considerate suficiente pentru a justifica o internare in spital. Lista de la D.5 este identica cu lista data pentru DRG 961Z, care apare in sectiunea Pre-CMD din Volumul 1.
D.6	Manifestarea ca diagnostic principal	Codurile de manifestare descriu manifestarile unui proces al bolii de baza (etiologie). Se afirma in standardul de codificare 0027 ca aceste coduri de manifestare – identificate in ICD-10-AM printr-un asterisc (*) – nu ar trebui sa fie alocate in mod normal ca diagnostice principale
D7a-7k	Conflict privind varsta	Aceasta editare este generata atunci cand exista inconsistente intre varsta unui pacient si codurile de diagnostic/procedura. Sunt folosite 11 categorii de varsta in acest scop: (a) `sugar` (371 diagnostice create in primul rand pentru nou-nascuti si neonatali, cu toate ca sunt valide pentru persoane in varsta de 1 pana la 364/5 zile); (b) `prima copilarie` (2 diagnostice valide pentru persoane in varsta de la 1 zi la 2 ani); (c) `copilarie` (3 diagnostice valide pentru persoane in varsta de la 1 zi la 10 ani); (d) `pediatric si adolescent` (166 diagnostice valide pentru persoane in varsta de la 1 zi la 19 ani); (e) `post neonatal` (36 diagnostice valide pentru persoane in varsta de mai mult de 27 zile); (f) `post sugar` (149 diagnostice valide pentru persoane in varsta de 1 an sau mai mult); (g) `pubertate` (4 diagnostice valide pentru persoane in varsta de la 8 la 19 ani); (h) `fertila` (518 diagnostice valide pentru persoane in varsta de la 12 la 55 ani); (i) `fertila` (120 proceduri valide pentru persoane in varsta de la 12 la 55 ani); (j) `adulta` (684 diagnostice valide pentru persoane in varsta de peste 15 ani); (k) `adulta matura` (62 diagnostice valide pentru persoane in varsta de peste 30 ani).
D.8a-8d	Conflict privind sexul	Aceasta editare este generata atunci cand exista inconsistente intre sexul unui pacient si codurile de diagnostic/procedura. Sunt folosite 4 categorii in acest scop: (a) diagnostice pentru femei (864 coduri); (b) proceduri pentru femei (418 coduri); (c) diagnostice pentru barbati (127 coduri); si (d) proceduri pentru barbati (163 coduri).

D. 4 Editare stegulete de avertizare si „fatal”

Asa cum s-a aratat mai sus, editarile demografice si clinice pot ridica stegulete atat de ´avertizare` cat si ´neacceptabile`. In tabelele D.5 pana la D.8d, a fost folosit un semn pentru sectiune (§) pentru identificarea codurilor din ICD-10-AM care sunt ´neacceptabile`. Se poate observa ca:

- toate diagnosticale principale neacceptabile (Tabel D.5) sunt eliminate, si rezulta in inregistrari ce sunt grupate la DRG 961Z *Diagnostic principal neacceptabil*;
- cele mai multe coduri pe lista conflictului privind varsta ´sugarului` (Tabelul D.7a) sunt eliminate daca ele sunt considerate ca diagnostic principal, iar (i) pacientul are varsta de 28 pana la 364/5 de zile si are o greutate la internare mai mare de 2500 grame sau (ii) pacientul are 1 an sau peste. Episoadele privind ´sugarul` cu stegulete neacceptabile sunt alocate la DRG 963Z *Diagnostic neonatal in neconcordanta cu varsta/greutatea*;
- mai multe coduri de pe listele celor doua sexe cuprinzand diagnostice (adica Tabelele D.8a si D.8c) sunt de asemenea neacceptabile. In general, codurile neacceptabile din Tabelul D.8a sunt diagnostice principale folosite exclusiv pentru CMD-urile 13 si 14, in timp ce codurile neacceptabile din Tabelul D.8c sunt diagnostice principale folosite exclusiv pentru CMD12. Inregistrările cu stegulete neacceptabile generate pe baza editarilor conflictului privind sexul sunt alocate la un CMD determinat de catre diagnosticul principal, dar la DRG 960Z *Negrupabil*; si
- toate celelalte editari clinice – adica, manifestarea ca diagnostic principal, cauza externa, conflict privind varsta (alta decat cea din lista ´sugarului`) si conflict privind sexul (altul decat diagnosticalele care sunt exclusive fie la CMD 12 sau CMD-urile 13 si 14) – genereaza stegulete de avertizare dar nu “fatale”.

D. 5 Situația grouper-ului

Atunci când procesul de grupare este complet, fiecărei înregistrări i se alocă un cod privind situația grouper-ului (GST) care indică succesul procesului de grupare. Dacă grouper-ul, în încercarea de a alocă o înregistrare unui DRG, întâlnește informația care lipsește sau este invalidată, înregistrarea este alocată la DRG 960Z *Negrupabil*, cu o situație a grouper-ului non-zero indicând tipul abaterii. Tabelul D. 4 da detalii pentru acest GST.

TABEL D. 4 Codurile privind situația grouper-ului (GST)

Codul GST	Descriere	Condiții
00	Grupare normală	Grupare normală
01	Diagnostic principal lipsa sau invalid	Diagnostic principal lipsa sau invalid
02	Codul de diagnostic nu poate fi folosit ca diagnostic principal	1. un cod U,V,W, X, Y ca diagnostic principal; sau 2. diagnosticul principal nu aparține nici unui CMD
03	Inregistrarea nu întrunește criteriile pentru vreun DRG	Diagnosticul principal nu aparține vreunui DRG sau înregistrarea nu poate fi alocată unui DRG în mod logic.
04	Varsta invalidă	Varsta nu poate fi dedusă dintr-un interval valid
05	Sex invalid	Sex invalid sau sex în conflict cu diagnosticul principal
06	Mod invalid de externare	Mod invalid de externare
07	Greutate invalidă la internare	Dacă unui pacient i se alocă CMD15 și câmpul greutății la internare este invalid.
08	Durata de spitalizare invalidă	Durata de spitalizare nu poate fi dedusă din date
09	Situația spitalizării de zi invalidă	Situația spitalizării de zi nu poate fi determinată din date.

Cu excepția 'varstei', avertizările editării demografice nu vor cauza o situație a grupării non-zero dacă nu este necesară o variabilă de clasificare pentru grupare. De exemplu, sexul nu este folosit ca o variabilă de clasificare pentru oricare din DRG-urile din CMD 01 (Boli & tulburări ale sistemului nervos), astfel încât o intrare invalidă a sexului nu ar afecta alocarea DRG-ului, iar GST ar fi pus la '00'. Totuși, dacă o înregistrare cu un sex care nu este valid urma să fie alocat la CMD 14 (Sarcina, naștere & lauzie), înregistrarea ar fi negrupabilă și GST ar fi trecut la '05'.

P26.8§	Alte hemoragii pulmonare survenind in perioada perinatale	P36.1§	Sepsis la nou-nascut cu alti streptococi si nespecificati

Anexa D Editări: Conflict varsta - diagnostic sugar

Codul	Descriere	Codul	Descriere
P36.2§	Sepsis la nou-nascut cu Staphylococcus aureus	P50.9§	Pierdere de sange fetal, nespecificata
P36.3§	Sepsis la nou-nascut cu alti stafilococi si nespecificati	P51.0§	Hemoragia ombilicala masiva a nou-nascutului
P36.4§	Sepsis la nou-nascut cu Escherichia coli	P51.8§	Alte hemoragii ombilicale ale nou-nascutului
P36.5§	Sepsis la nou-nascut datorita anaerobilor	P51.9§	Hemoragia ombilicala a nou-nascutului, nespecificata
P36.8§	Alt sepsis bacterian la nou-nascut	P52.0§	Hemoragia intraventriculara (netraumatica), gradul 1, a fatului si nou-nascutului)
P36.9§	Sepsis bacterian la nou-nascut, nespecificat	P52.1§	Hemoragia intraventriculara (netraumatica), gradul 2, a fatului si nou-nascutului
P37.0	Tuberculoza congenitala	P52.2§	Hemoragia intraventriculara (netraumatica), gradul 3, a fatului si nou-nascutului
P37.1	Toxoplasmoza congenitala	P52.3§	Hemoragia intraventriculara (netraumatica) a fatului si nou-nascutului, nespecificata
P37.2	Listerioza neonatala (diseminata)	P52.4§	Hemoragia intracerebrala (netraumatica) a fatului si nou-nascutului
P37.3	Paludism congenital cu Plasmodium falciparum	P52.5§	Hemoragia subarahnoida (netraumatica) a fatului si nou-nascutului
P37.4	Alte forme de paludism congenital	P52.6§	Hemoragia cerebelara si a fosei posterioare (netraumatica) a fatului si nou-nascutului
P37.50§	Candidoza neonatala, nespecificata	P52.8§	Alte hemoragii intracraniene (netraumatice) ale fatului si nou-nascutului
P37.51§	Candidoza neonatala gastrointestinala sau actuala	P52.9§	Hemoragia intracraniana (netraumatica) a fatului si nou-nascutului, nespecificata
P37.52§	Candidoza neonatala invaziva	P53	Boala hemoragica a fatului si nou-nascutului
P37.59§	Alte forme de candidoza neonatala	P54.0§	Hematemeza neonatala
P37.8	Alte boli infectioase si parazitare congenitale specificate	P54.1§	Melena neonatala
P37.9	Boli infectioase si parazitare congenitale, nespecificate	P54.2§	Hemoragia rectala neonatala
P38§	Omfalita nou-nascutului cu sau fara hemoragie usoara	P54.3§	Alte hemoragii gastro-intestinale neonatale
P39.0§	Mastita infectioasa neonatala	P54.4§	Hemoragia suprarenala neonatala
P39.1§	Conjunctivita si dacriocistita neonatala	P54.5§	Hemoragia cutanata neonatala
P39.2§	Infectia intra-amniotica a fatului, neclasificata altundeva	P54.6§	Hemoragia vaginala neonatala
P39.3§	Infectia neonatala a tractului urinar	P54.8§	Alte hemoragii neonatale specificate
P39.4§	Infectia neonatala a pielii	P54.9§	Hemoragia neonatala, nespecificata
P39.8§	Alte infectii specificate specifice perioadei perinatale	P55.0	Izoimunizare Rh a fatului si nou-nascutului
P39.9§	Infectie specifica perioadei perinatale, nespecificate	P55.1	Izoimunizare ABO a fatului si nou-nascutului
P50.0§	Pierderea de sange fetal prin procidenta vaselor cordonului	P55.8	Alte boli hemolitice imune ale fatului si nou-nascutului
P50.1§	Pierderea de sange fetal prin ruptura cordonului ombilical	P55.9	Boala hemolitica a fatului si nou-nascutului, nespecificata
P50.2§	Pierderea de sange fetal de origine placentara	P56.0§	Anasarca fetoplacentara datorita izoimunizarii
P50.3§	Hemoragia intre gemeni	P56.9§	Anasarca fetoplacentara datorita altor boli hemolitice nespecificate
P50.4§	Hemoragia in circulatia sangvina materna		
P50.5§	Pierderea de sange fetal la capatul taiat al cordonului fatului geaman		
P50.8§	Alte pierderi de sange la fat		

Anexa D Editări: Conflict varsta - diagnostic sugar

Codul	Descriere	Codul	Descriere
P57.0§	Icter nuclear datorita izoimunizarii	P70.3	Hipoglicemia neonatala iatrogena
P57.8§	Alte forme specificate de icter nuclear	P70.4	Alte hipoglicemii neonatale
P57.9§	Icter nuclear, nespecificat	P70.8	Alte tulburari tranzitorii de metabolism al carbohidratilor la fat si nou-nascut
P58.0§	Icter neonatal datorit contuziilor	P70.9	Tulburari tranzitorii de metabolism al carbohidratilor la fat si nou-nascut, nespecificate
P58.1§	Icter neonatal datorit sangerarii	P71.0	Hipocalcemia nou-nascutului datorita laptelui de vaca
P58.2§	Icter neonatal datorit unei infectii	P71.1	Alte hipocalcemii ale nou-nascutului
P58.3§	Icter neonatal datorit unei policitemii	P71.2	Hipomagnezemia neonatala
P58.4§	Icter neonatal datorit medicamentelor sau toxinelor transmise de mama sau administrate nou-nascutului.	P71.3	Tetania neonatala fara carenta in calciu si magneziu
P58.5§	Icter neonatal datorit deglutitiei sangelui matern	P71.4	Hipoparatiroidism neonatal tranzitoriu
P58.8§	Icter neonatal datorit altor hemolize excesive specificate	P71.8	Alte tulburari tranzitorii neonatale de metabolism al calciului si magneziului
P58.9§	Icter neonatal datorit unei hemolize excesive, nespecificat	P71.9	Tulburari tranzitorii neonatale de metabolism al calciului si magneziului, nespecificate
P59.0§	Icter neonatal asociat nasterii inainte de termen	P72.0	Gusa neonatala, neclasificata altundeva
P59.1	Sindromul "bilei ingrosate"	P72.1	Hipertiroidism neonatal tranzitoriu
P59.2	Icter neonatal datorit altor leziuni hepato-celulare si nespecificate	P72.2	Alte tulburari neonatale tranzitorii ale functiei tiroidiene, neclasificate altundeva
P59.3§	Icter neonatal datorit inhibitorilor de lactatie	P72.8	Alte tulburari endocrine neonatale tranzitorii specificate
P59.8§	Icter neonatal datorit altor cauze specificate	P72.9	Tulburari endocrine neonatale tranzitorii nespecificate
P59.9§	Icter neonatal, nespecificat	P74.0	Acidoza metabolica a nou-nascutului
P60	Coagularea intravasculara diseminata la fat si nou-nascut	P74.1	Deshidratarea nou-nascutului
P61.0	Trombocitopenia neonatala tranzitorie	P74.20	Pertubarea echilibrului sodiului la nou-nascut, nespecificata
P61.1§	Policitemia nou-nascutului	P74.21	Hipernatremia la nou-nascut
P61.2	Anemia prematuritatii	P74.22	Hiponatremia la nou-nascut
P61.3	Anemia congenitala prin pierderi de sange fetal	P74.29	Alte pertubari ale echilibrului sodiului la nou-nascut
P61.4	Alte anemii congenitale, neclasificate altundeva	P74.30	Pertubarea echilibrului potasiului la nou-nascut, nespecificata
P61.5	Neutropenia neonatala tranzitorie	P74.31	Hiperkalemia nou-nascutului
P61.6	Alte tulburari tranzitorii ale coagularii in perioada neonatala	P74.32	Hipokalemia nou-nascutului
P61.8§	Alte tulburari hematologice specificate ale perioadei perinatale	P74.39	Alte pertubari ale echilibrului potasiului la nou-nascut
P61.9§	Tulburari hematologice ale perioadei perinatale, nespecificate	P74.4	Alte pertubari electrolitice tranzitorii la nou-nascut
P70.0§	Sindromul copilului a carui mama are un diabet gestational	P74.5	Tirozinemia tranzitorie la nou-nascut
P70.1§	Sindromul copilului cu mama diabetica	P74.8	Alte pertubari metabolice tranzitorii ale nou-nascutului
P70.2	Diabet mellitus neonatal	P74.9	Pertubari metabolice tranzitorii ale nou-nascutului, nespecificate

90391-00	Incizie a veziculei seminale		
90392-00	Control al hemoragiei prostatice		
90393-00	Excizie a veziculei seminale		
90394-00	Dilatatie transuretrala cu balon a uretrei prostatice		
90395-00	Alte proceduri la nivelul prostatei		
90395-01	Alte proceduri la nivelul veziculelor seminale		

Glosar

Grup Adiacent de Diagnostic Inrudite (ADRG)

Unul sau mai multe DRG-uri definite in general prin aceeași lista de coduri privind diagnosticul sau procedura. DRG-urile din cadrul unui DRG Adiacent are nivele diferite de consum al resurselor, și se împart pe baza mai multor factori, incluzând diagnosticile/procedurile cu complicații, vârsta, și/sau nivelul de complexitate clinică a pacientului.

Diagnostic aditional (SDX)

O afecțiune sau o suferință care fie coexistă cu diagnosticul principal fie apare în timpul episodului de îngrijiri sau la prezentarea la o unitate de îngrijiri de sănătate (NHDC 2001).

Data admiterii/internării (ADT)

Data la care un pacient admis/internat începe un episod de îngrijiri.

Greutatea la admitere (AdmWt)

Greutatea la admiterea/internare într-un spital pentru copiii în vârstă de sub un an.

Pacient admis/internat

Un pacient admis este un pacient care suferă un proces de admitere/internare formală într-un spital fie ca un pacient care stă noaptea fie unul care stă numai o zi.

Grupuri Naționale Australiene de Diagnostic Inrudite (AN-DRG)

Prima clasificare națională DRG a Australiei, dezvoltată de 3M și Commonwealth. Au apărut versiunile 1.0, 2.0, 2.1, 3.0 și 3.1 între 1992 și 1996.

Grupuri Actualizate Australiene de Diagnostic Inrudite (AR-DRG)

A doua clasificare națională DRG a Australiei, dezvoltată de Commonwealth. Au apărut din 1997 versiunile 3.2, 4.0, 4.1, 4.2 și 5.0.

Mapping

Leaga codurile dintr-o anumită clasificare sau ediție a unei clasificări cu codurile dintr-o altă clasificare sau ediție a unei clasificări, pe baza sensului clinic și de codificare.

Complicație

Un proces sau eveniment morbid producându-se în timpul unei boli nefiind o parte esențială a bolii, cu toate că el poate rezulta din boala sau din cauze independente (Stedman 1990).

Complicație și/sau comorbiditate (CC)

Codurile CC sunt diagnostice aditionale care pot rezulta într-un consum semnificativ mai mare de resurse.

Lista de excludere a CC

Starea de CC a unui cod de diagnostic se poate schimba în funcție de diagnosticul principal și alte diagnostice aditionale pentru înregistrare și alte scopuri. Articolele din lista de excludere a CC specifică, pentru fiecare cod de CC, alte diagnostice care ar împiedica respectivul cod de a fi considerat ca un CC.

Comorbiditate

Un proces concomitent dar care nu este înrudit patologic cu respectiva boală; de obicei folosit în epidemiologie pentru a arăta coexistența a două sau mai multe procese de boală (Stedman 1990).

Complicație și comorbiditate (CCL)

CCL este o pondere de severitate dată TUTUROR diagnosticelor aditionale. Intervalul valorilor sale este de la 0 la 4 pentru episoadele chirurgicale și neonatale, și de la 0 la 3 pentru episoadele medicale și a fost dezvoltat printr-o combinație judecătorească medicală și a analizei statistice. Adică, 1 = o complicație sau comorbiditate minoră; 2 = o complicație sau comorbiditate moderată; 3 = o complicație sau comorbiditate majoră; și 4 = o complicație sau comorbiditate catastrofală.

Grupuri de diagnostic inrudite (DRG)

O schema de clasificare a pacientului care furnizează un mod clinic *MEANINGFUL* de a lega numărul și tipurile de pacienți tratați într-un spital de resursele cerute de către spital.

DRG abatere

Inregistrările spitalicești care contin informații invalide sau atipice clinic sunt alocate unuia din cele șase DRG-uri Eroare din AR-DRG versiunea 5.0:

901Z. *Procedura efectuată în sala de operații extensivă nelegată de diagnosticul principal;* **902Z.** *Procedura efectuată în sala de operații non-extensivă nelegată de diagnosticul principal;* **903Z.** *Procedura prostatică efectuată în sala de operații nelegată de diagnosticul principal;* **960Z.** *Negrupabil;* **961Z.** *Diagnostic principal neacceptabil și* **963Z.** *Diagnostic neonatal care nu este în conformitate cu vârsta/greutatea.*

Funcții

Acestea constau în logica și coduri folosite de către mai multe MDC-uri sau DRG-uri adiacente din cadrul unui MDC. În AR-DRG versiunea 5.0, funcțiile sunt folosite pentru a defini patru concepte: problema majoră; probleme multiple majore; pacemaker; și proceduri care nu sunt legate de sala de operații. Funcțiile problemei majore și problemelor multiple majore sunt limitate la MDC 15, dar celelalte două funcții apar în alte MDC-uri.

Grouper

Grouper-ul este un software proiectat în special pentru calculator care alocă episoadele spitalicești MDC-urilor și DRG-urilor.

Durata de spitalizare (LOS)

Durata de spitalizare a unui pacient este măsurată în pacient zile. Unui pacient care are o spitalizare de o singură zi ar trebui să i se aloce o durată de spitalizare ozi pacient. Durata de spitalizare a unui pacient care sta peste noapte este calculată prin scăderea datei la care pacientul este internat din data externării. Durata de spitalizare este apoi redusă cu numărul de zile de concediu medical, dacă zilele de concediu medical sunt mai puține decât durata de spitalizare. Totalul zilelor de spitalizare ale pacientului sunt incluse în durata de spitalizare. (NHDC 2001)

Categorie majoră de diagnostic (MDC)

MDC este o categorie bazată în general pe un singur sistem al corpului sau etiologie care este asociată cu asociată cu o anume specialitate medicală. Totuși, înregistrările alocate MDC-urilor 01, 15, 18 și 21 pot avea diagnostice principale asociate cu alte categorii. În AR-DRG versiunea 5.0 sunt 23 de MDC-uri.

Stare legală de sănătate mentală (MHLS)

Un indicator care arată dacă un pacient admis este tratat pe o bază involuntară supusă legislației de stat sau teritoriale relevante privind sănătatea mentală, în orice moment în timpul unui episod de îngrijiri într-o perioadă de raportare. Pacienții involuntari sunt persoane care sunt reținute în spital sau tratate obligatoriu în comunitate supuse legislației sanatații mentale în scopul evaluării sau acordării unui tratament sau îngrijirilor adecvate. (NHDC 2001)

Proceduri care nu sunt efectuate în sala de operații

Procedurile considerate semnificative de către clasificare pentru MDC-uri. Totuși, este bine de notat că procedurile identificate ca nefiind efectuate în sala de operații pot avea loc în salile de operații în scopurile AR-DRG versiunea 5.0.

Ventilare neinvazivă (NIV)

Acest tip de ventilare asistată include următoarele proceduri neinvazive: BiPAP, CPAP, CNP și IPPB, și nu necesită o traheostomie sau intubație.

Neclasificabil altundeva (NEC)

O abreviere folosită în descrierea codului din ICD-10-AM, care arată că nu este furnizată o categorie mai specifică în Lista Tabelară a codurilor ICD și că nici o informație adițională nu va altera codul.

Nespecificat altminteri (NOS)

O abreviere folosită în descrierea codului din ICD-10-AM, care arată că există o lipsă de detalii suficiente în **declararea-redactarea** diagnosticului sau procedurii pentru fi alocate unei subdiviziuni mai specifice.

Proceduri efectuate în sala de operații (O.R.)

Procedurile considerate semnificative în întregul AR-DRG versiunea 5.0.

Nivel de complexitate clinică al pacientului (PCCL)

Acesta este o măsură a efectului cumulativ al complicațiilor și comorbidității unui pacient, și este calculat pentru fiecare episod. Calculul este complex și a fost desemnat pentru a preveni afecțiuni similare de a fi numărate mai mult decât o singură dată.

Diagnostic principal (PDX)

Diagnosticul stabilit dupa examinare considerat a fi responsabil in principal pentru producerea episodului de ingrijire a pacientului in spital (sau prezentarea la o unitate de ingrijiri de sanatate). (NHDC 2001)

Admitere/internare de zi in spital

O admitere/internare in care pacientul este internat si separat (externat/transferat/decedat) in aceeasi zi.

Separare/externare

Procesul prin care un pacient admis/internat completeaza un episod de ingrijiri.

Diviziune chirurgicala, alta si medicala

MDC-urile sunt sub-impartite in maximum trei diviziuni separate, pentru chirurgical, alta si medical. Prezentă sau absența procedurilor efectuate în sala de operații sau cele care nu sunt efectuate în sala de operații este în general responsabilă pentru alocarea unei înregistrări într-una din aceste diviziuni.
